Symbolizing Existence Ludger Hovestadt,Vera Bühlmann,2016-05-24 Symbolizing Existence deals with the current rapidly happening "deterritorialization" of everything which was once regarded stable and binding. What we today regard as statistically encoded information is capable to explicate and index the entire realm of what can be expressed and represented through a cascade of geometrical, functional, or finally logified schemes. We are currently experiencing a rapid loss of "grounding" of that which we once considered binding in our cultural and intellectual history. How can we obtain an articulate, cultivate way of thinking about "instances" that does not fall back into a schematic model Platonism (thereby falling behind Plato), and that does not remain enmeshed in an Aristotelian realization dynamics with a naturalism organized by original genus, kinds, and specific marks of distinction? The central phenomenon considered was the technological process of doping material: At the quantum level, a particle or its representation, the point, is no longer "that which has no parts" (Euclid).

The Design and Engineering of Curiosity Emily Lakdawalla,2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.

She has everything she needs at home, where nobody can make fun of her rigid routines or her superpowered brain. The equation of Lucy's life has already been solved. Eco-Architecture IX P. Chias,S. Hernandez,2022-09-13 Architecture is very multi-disciplinary, attracting many different professions. This is reflected in the contributions contained in this volume that were originally presented at the 9th International Conference on Harmonisation between Architecture and Nature. The included works review the challenges and new opportunities of contemporary architecture as a result of advances in design and new building technologies, as well as the development of new materials. Never before in history have architects and engineers had such a range of new processes and products open to them. In spite of that, the construction industry lags behind all others in taking advantage of a wide variety of new technologies. This is understandable, due to the inherent complexity and uniqueness of each architectural project. Advances in computer and information systems, including robotics, offers the possibility of developing new architectural forms, construction products and building technologies that are just now starting to emerge. Changes have also taken place in the way modern society works and lives, due to the impact of modern technologies. Patterns of work have been disrupted and changed, affecting transportation and the home environment. The demand is for a new type of habitat that can respond to the changes and the consequent requirements in terms of the urban environment. Such topics are dealt with as building technologies, design by passive systems, design with nature, cultural sensitivity, life cycle assessment, resources and rehabilitation and many others including case studies from many different places around the world.

Happiness Is a Choice You Make John Leland, 2018-01-23 A New York Times Bestseller! An extraordinary look at what it means to grow old and a heartening guide to well-being, *Happiness Is a Choice You Make* weaves together the stories and wisdom of six New Yorkers who number among the “oldest old”— those eighty-five and up. In 2015, when the award-winning journalist John Leland set out on behalf of *The New York Times* to meet members of America’s fastest-growing age group, he anticipated learning of challenges, of loneliness, and of the deterioration of body, mind, and quality of life. But the elders he met took him in an entirely different direction. Despite disparate backgrounds and circumstances, they each lived with a surprising lightness and contentment. The reality Leland encountered upended contemporary notions of aging, revealing the late stages of life as unexpectedly rich and the elderly as incomparably wise. *Happiness Is a Choice You Make* is an enduring collection of lessons that emphasizes, above all, the extraordinary influence we wield over the quality of our lives. With humility, heart, and wit, Leland has crafted a sophisticated and necessary reflection on how to “live better”—informed by those who have mastered the art.
